Per quanto ci dedichiamo a smart working e multitasking, amiamo i nostri dispositivi

elettronici e pensiamo di avere tutto sotto controllo, dentro di noi sappiamo che qualcosa non va. Calo dell'attenzione, indebolimento del pensiero critico, scarsa qualità del sonno, diminuzione della creatività sono solo alcuni degli effetti negativi sempre più comuni in quest'epoca di distrazione digitale. Qualunque sia la nostra concezione di successo e felicità, la capacità di avvicinarci a questi obiettivi sembra essersi perduta. È il momento di riprendere il controllo delle nostre vite. De-crescere bene è un percorso per ritrovare il giusto equilibrio e tornare a essere padroni del nostro destino. Brian Solis l'ha intrapreso in prima persona, e ha creato una serie di tecniche, esercizi ed esperimenti di pensiero utili a riprendere il controllo sul caos e ricominciare a vivere ogni giornata in modo positivo e produttivo. Anziché cedere al richiamo di notifiche, like, app e social - da cui, soprattutto nei momenti di noia, è difficile staccarsi - possiamo imparare a gestire meglio il nostro tempo e ritrovare l'ispirazione che ci serve, senza per questo rinunciare agli innegabili vantaggi offerti dai nostri dispositivi. Solis unisce pensiero scientifico a consigli pratici, senza lasciarci mancare ironia, pathos e forza motivatrice, che sono il vero valore di questo libro. De-crescere bene offre strumenti semplici ma molto forti per:

- identificare le principali fonti di distrazione e spostare l'attenzione su attività creative e produttive;
- riconoscere e contrastare le strategie di manipolazione che portano alla dipendenza digitale;
- trovare motivazioni e scopo di impiegare il tempo in modo più significativo e smettere di procrastinare;
- interrompere le cattive abitudini, stabilire i rituali e mettere in pratica la routine necessaria per

raggiungere gli obiettivi; • massimizzare la produttività con strategie semplici ma efficaci; • mantenere la concentrazione per lunghi periodi; • sorridere di più e aumentare l'autostima. Spesso realizziamo solo una piccola parte di ciò di cui saremmo capaci e viviamo nell'ombra di ciò che potremmo fare. Ce ne accorgiamo ogni volta che lasciamo spazio alle distrazioni, ma non abbiamo la reale consapevolezza di quanto il lato oscuro della tecnologia ci tenga prigionieri. Grazie alla nuova prospettiva offerta da questo libro, possiamo finalmente imparare a dare priorità a ciò che è realmente importante e vivere la nostra vita - fisica e digitale - nel modo che più desideriamo.

The common sense on the division by zero with the long and mysterious history is wrong and our basic idea on the space around the point at infinity is also wrong since Euclid. On the gradient or on differential coefficients we have a great missing since  $\tan(\pi/2) = 0$ . Our mathematics is also wrong in elementary mathematics on the division by zero. In this book in a new and definite sense, we will show and give various applications of the division by zero  $0/0 = 1/0 = z/0 = 0$ . In particular, we will introduce several fundamental concepts in calculus, Euclidean geometry, analytic geometry, complex analysis and differential equations. We will see new properties on the Laurent expansion, singularity, derivative, extension of solutions of differential equations beyond analytical and isolated singularities, and reduction problems of differential equations. On Euclidean geometry and analytic geometry, we will find new fields by the concept of the division by zero. We will collect many concrete properties in mathematical sciences

Discover how poor identity and privilege management can be leveraged to compromise accounts and credentials within an organization. Learn how role-based identity assignments, entitlements, and auditing strategies can be implemented to mitigate the threats leveraging accounts and identities and how to manage compliance for regulatory initiatives. As a solution, Identity Access Management (IAM) has emerged as

the cornerstone of enterprise security. Managing accounts, credentials, roles, certification, and attestation reporting for all resources is now a security and compliance mandate. When identity theft and poor identity management is leveraged as an attack vector, risk and vulnerabilities increase exponentially. As cyber attacks continue to increase in volume and sophistication, it is not a matter of if, but when, your organization will have an incident. Threat actors target accounts, users, and their associated identities, to conduct their malicious activities through privileged attacks and asset vulnerabilities. Identity Attack Vectors details the risks associated with poor identity management practices, the techniques that threat actors and insiders leverage, and the operational best practices that organizations should adopt to protect against identity theft and account compromises, and to develop an effective identity governance program. What You Will Learn Understand the concepts behind an identity and how their associated credentials and accounts can be leveraged as an attack vector Implement an effective Identity Access Management (IAM) program to manage identities and roles, and provide certification for regulatory compliance See where identity management controls play a part of the cyber kill chain and how privileges should be managed as a potential weak link Build upon industry standards to integrate key identity management technologies into a corporate ecosystem Plan for a successful deployment, implementation scope, measurable risk reduction, auditing and discovery, regulatory reporting, and oversight based on real-world strategies to prevent identity

Luca Del Baldo's Visionary Academy of Ocular Mentality is an extraordinary testament in the recent history of visual studies. It brings together a group of outstanding scholars who have devoted their lives to art history, philosophy, history, ethnology, focussing predominantly on questions of human perception and imagination. Working from photographs provided by the scholars, Luca del Baldo painted his series of 96 portraits reproduced in this book. The portraits are accompanied by texts written by the persons portrayed, in response to their portrayal, and as an exchange: the artist gifted the original painting to the portrayed person, and the portrayed gifted her or his response. "The result is a unique and profound conversation between image and text focussed on the enigma of the human face in all its mediations." (W.J.T. Mitchell)

This book will make you learn German in just 30 days, starting from scratch. And this is more than just a promise. Let me explain it to you... The method is very simple: this book is divided into 30 chapters, one per day. This, will allow you to learn the basics of this language in just one month. To get the most out of this course, you just have to respect one, simple rule. You must read one chapter per day, no more, no less. If you respect this rule, and follow the instructions you find in this book, the result is guaranteed. Forget the usual boring grammar courses with an anonymous and depersonalized profile. "How to learn German in 30 days" has been realized with all the trimmings of self-help. It looks like a practical manual, with a personal, fun and motivating cut. It is rich of several curious anecdotes and useful tips not only to speak German, but also to get by on the road. If you are still not convinced, keep reading... From the author's introduction... German, trust me, will open you a lot of doors: and, not of secondary importance, you'll face far less competition than you would with Spanish or French, for example, since German is less widespread studied in schools and

universities. Thus, in short, this manual will give you, within a month, all the grammatical skills you need to juggle the meanders of a language that is really useful and usable for those who have in mind career ambitions, tourism goals, or simply personal curiosity interests. Finally, please, don't worry, I will also provide you with many other useful tools, like online channels, readings and suitable movies, in order that the course and your learning will continue even beyond this month. You'll like it, you'll see, and you'll be abundantly satisfied, even if at the beginning, as is normal, you are doubtful and still convinced that the good old traditional courses, with their long structure and depersonalising attitude, are yet the state of the art, the best the market can offer.

Nothing in cities makes sense except in the light of accessibility. Transport cannot be understood without reference to the location of activities (land use), and vice versa. To understand one requires understanding the other. However, for a variety of historical reasons, transport and land use are quite divorced in practice. Typical transport engineers only touch land use planning courses once at most, and only then if they attend graduate school. Land use planners understand transport the way everyone does, from the perspective of the traveler, not of the system, and are seldom exposed to transport aside from, at best, a lone course in graduate school. This text aims to bridge the chasm, helping engineers understand the elements of access that are associated not only with traffic, but also with human behavior and activity location, and helping planners understand the technology underlying transport engineering, the processes, equations, and logic that make up the transport half of the accessibility

This book explores?at the macro, meso and micro levels and in terms of qualitative as well as quantitative studies?the current and future role of museums for art and society. Given the dynamic developments in art and society, museums need to change in order to remain (and in some ways, regain) relevance. This relevance is in the sense of a power to influence. Additionally museums have challenges that arise in the production of art through the use of permanent and rapidly changing technologies. This book examines how museums deal with the increasing importance of performance art and social interactive art, artistic disciplines which refuse to use classical or digital artistic media in their artistic processes. The book also observes how museums are adapting in

the digital age. It addresses such questions as, “How to keep museums in contact with recipients of art in a world in which the patterns of communication and perception have changed dramatically,” and also “Can the art museum, as a real place, be a counterpart in a virtualized and digitalized society or will museums need to virtualize and even globalize themselves virtually?” Chapters also cover topics such as the merits of digital technologies in museums and how visitors perceive these changes and innovations. When you go back to the etymological origin, the Mouseion of Alexandria, it was a place where – supported by the knowledge stored there – art and science were developed: a place of interdisciplinary research and networking, as you would call it today. The word from the Ancient Hellenic language for museum (????????) means the “house of the muses”: where the arts and sciences find their berth and cradle. With the “Wunderkammer,” the museum was re-invented as a place for amazing for purpose of representation of dynastic power, followed by the establishment of museums as a demonstration of bourgeois self-consciousness. In the twentieth century, the ideal of the museum as an institution for education received a strong boost, before the museum as a tourism infrastructure became more and more the institutional, economic and political role-model. This book is interested in discovering what is next for museums and how these developments will affect art and society. Each of the chapters are written by academics in the field, but also by curators and directors of major museums and art institutions.

Transire mare. Con questo titolo il 2° Convegno nazionale di Cultura navale e marittima – CNM2 di Genova ha affrontato, nel 2016, il complesso rapporto tra l'uomo ed il mare nelle sue diverse connotazioni e sfumature. Il mare come confine geografico e legame, come limite da superare e come ambiente con cui confrontarsi per crescere. Questo è il tema conduttore di una serie di saggi di alto profilo che, presentati durante due giornate di convegno molto denso, sono stati raccolti grazie all'impegno di un nutrito gruppo di specialisti del settore. Questo volume, che non è un semplice resoconto, offre nei diversi settori in cui si articola uno spaccato delle più recenti ricerche, con l'intento di fornire ai lettori strumenti utili per la comprensione e l'approfondimento delle diverse sfaccettature di cui si compone il millenario rapporto tra l'uomo e il mare.

As part of the work implemented by CGIAR on COVID-19, the COVID-19 Research Hub Working Group 4 “Address food systems’ fragility and build back better” was tasked with implementing a global assessment of the impacts of COVID-19 on food systems and their actors, focusing specifically on the consequences that the pandemic had brought on the food security and nutrition of those who have been affected by the crisis. This includes formal and informal actors of the food supply chains (from

producers to street vendors) as well as consumers, in both rural and urban environments. Building on this assessment, the task was then to draw on key principles of resilience in the context of humanitarian and food security crisis, to identify preliminary elements of a food system resilience research agenda.

Every tweet, search, check of a webpage creates pollution. Digital is physical. Those data centers are not in the Cloud. They're on land in massive physical buildings packed full of computers hungry for energy. It seems invisible. It seems cheap and free. It's not. Digital costs the Earth.

This book analyses gendered language in Italian, shedding light on how the Italian language constructs and reproduces the social imbalance between women and men, and presenting indirect and direct instances of asymmetrical constructions of gender in public and private roles. The author examines linguistic treatments of women in politics and the media, as well as the gendered crime of femminicidio, i.e. the killing of women by their (former) partners. Through the combination of corpus linguistics, surveys, and discourse analysis, she establishes a new approach to the study of gendered Italian, a framework which can be applied to other languages and epistemological sites. This book will be of particular interest to students and scholars of sociolinguistics, language and gender, discourse analysis, Italian and other Romance languages.

Incorporating contingency into our fundamental thinking about architecture contradicts the way we theorize, practice, and historicize the field. Accidents happen, yet architects rarely let chance play a role in their visions. How contingency play a role in architectural design and thinking? How designers incorporate change in their practice? The forward-facing nature of contingency scholarship, if we give it a name, may embed possible worlds that are more just, more compassionate, and more aware of the inequalities that accompany the uneven distribution of the most vital resource i our times: space. This issue began with the aim of exploring contingency thinking, and is completed from within contingent times, when nothing seems certain and contingency is less a lens than the air we breathe.

The Burning Question reveals climate change to be the most fascinating scientific, political and social puzzle in history. It shows that carbon emissions are still accelerating upwards, following an exponential curve that goes back centuries. One reason is that saving energy is like squeezing a balloon: reductions in one place lead to increases elsewhere. Another reason is that clean energy sources don't in themselves slow the rate of fossil fuel extraction. Tackling global warming will mean persuading the world to abandon oil, coal and gas reserves worth many trillions of dollars — at least until we have the means to put carbon back in the ground. The burning question is whether that can be done. What mix of politics, psychology, economics and technology might be required? Are the energy companies massively overvalued, and how will carbon-cuts affect the global economy? Will we wake up to the threat in time? And who can do what to make it all happen?
