This book provides a bridge between the introductory research methods books and the discipline-specific, higher level texts. Its unique feature is the coverage of the detailed process of research rather than the findings of research projects. Chapter authors have been carefully selected by their expertise, discipline and location to give an eclectic range of perspectives. Particular care has been taken to balance positivist with interpretivist approaches throughout. The authors focus is on the practical consequences of research philosophies, strategies and techniques by using their own research and by evaluating the work of others. Advanced Research Methods in the Built Environment addresses common topics raised by postgraduate level researchers rather than dealing with all aspects of the research process. Issues covered range from the practicalities of producing a journal article to the role of theory in research. The material brought together here provides a valuable resource for the training and development of doctoral and young researchers and will contribute to a new

sense of shared methodological understanding across built environment research.

Energy efficiency, climate and biodiversity protection are among the top priorities of the EU and all member states. In order to meet the challenges of growing landfills, scarcity of resources, air pollution, to name only a few of them, new ways of thinking and of economic activities are essential. This is exactly what the Cradle to Cradle® (C2C) concept delivers: products flow in infinite material life cycles thus being economically successful, conducive to the environment and healthy for consumers without producing any waste. Cradle to Cradle® concept, born as vision by Prof. Dr. Michael Braungart and William McDonough in 1990ies, has become real. It is well known on the world market: more than 1.500 products have been developed. Despite the advantages, the Cradle to Cradle approach has mostly been used by big companies and is hardly known in SMEs. Thus a EU funded project was started in 2014 to develop trainings for Cradle to Cradle for SMEs. This book contains the training, including train-the-trainer, experiences and presentations made at the final conference in 2016. It contains substantial contributions by authors like Michael Braungart, Thomas Straubhaar and others.
